WHEN IN DOUBT, THROW IT OUT.

NO! THESE ITEMS ARE NOT CURRENTLY RECYCLABLE IN OUR SYSTEM

As of April 9, 2018, plastic tubs are no longer accepted in our recycling stream.

WHY SHOULD I RECYCLE?

You know the four R's (Reduce, Reuse, Repair, and Recycle) – now let's talk about the three E's: Energy, Economy, and Environment. Recycling saves energy because the manufacturer doesn't have to produce something new from raw natural resources. When energy consumption goes down, production costs go down. Savings are passed on to the consumer, and when recycled products are purchased, a demand for more recycled goods is promoted. This improves the economy. Waste has a huge negative impact on the natural environment, including the land, air, and water. Recycling reduces the need for more landfills, where harmful chemicals and greenhouse gasses are released into the air and land. By recycling, you are actively improving the planet's overall health by helping keep the air, water and land clean.
